

Honor Intrinsic Brand Fungicide

Research Proves Honor Intrinsic Brand Fungicide Works

In addition to disease control, **Honor Intrinsic** brand fungicide also offers plant health benefits. Research shows turf treated with **Honor Intrinsic** brand fungicide provides improved plant health in the form of stress management. This includes drought/moisture, temperature extremes and mechanical stress such as aerification.

In addition, research also shows turf treated with **Honor Intrinsic** brand fungicide has increased root length and density. **Intrinsic** brand fungicides prime the immune system of the turfgrass before an event. This helps the plant and root system endure the stress event and overcome the stress through root system retention.

Diseases Controlled

Where to Use Honor Intrinsic brand fungicide

Honor Intrinsic brand fungicide is labeled for use on golf courses.

Refer to product label for additional information.

Keys to Success

For maximum efficacy, **Honor Intrinsic** brand fungicide should be applied prior to or in the early stages of disease development. Apply **Honor Intrinsic** brand fungicide at the labeled rates and intervals. Applications can be repeated at specified intervals and foliage should be dry prior to applying **Honor Intrinsic** brand fungicide.

To improve control of certain diseases, **Honor Intrinsic** brand fungicide may be tank-mixed with other effective fungicides from a different target site group. In fact, **Honor Intrinsic** brand fungicide is compatible with most fungicide, insecticide and fertilizer products, such as **Trinity**® fungicide. However, if tank mixes are used, adhere to restrictions due to rates, label recommendations and precautions on all labels. Perform a jar test to determine compatibility.

Always read and follow label directions.
