

Insignia Delivers Superior Intrinsic Activity. Here's How:

Pyraclostrobin, the active ingredient in **Insignia**, is an exciting kind of strobilurin chemistry. It is locally systemic, moving both upward and downward to a limited degree, to protect unsprayed portions of the leaf. In addition, pyraclostrobin will move from the top to the bottom of the leaf (translaminar movement), so **Insignia** applied to the top of the foliage will give protection to the underside as well.

Control More. Spend Less.

Insignia controls key diseases up to 28 days, reducing your labor and materials costs. The broad spectrum of turf diseases **Insignia** controls includes:

- >> Anthracnose
- >> Dead Spot
- >> Brown Patch
- >> Fairy Ring
- >> Fusarium Patch
- >> Gray Leaf Spot
- >> Gray Snow Mold
- >> Leaf Spot
- >> Melting Out
- >> Pink Snow Mold
- >> Powdery Mildew
- >> Pythium Blight
- >> Rapid Blight
- >> Red Thread
- >> Rust
- >> Summer Patch
- >> Take-All Patch
- >> Pink Patch
- >> Plus Dollar Spot suppression

Where To Use Insignia.

Insignia may be used on 12 turf species:

- >> Creeping Bentgrass
- >> Colonial Bentgrass
- >> Common Bermudagrass
- >> Annual Bluegrass
- >> Annual Ryegrass
- >> St. Augustinegrass
- >> Bahiagrass
- >> Hybrid Bermudagrass
- >> Kentucky Bluegrass

- >> Perennial Ryegrass
- >> Tall Fescue
- >> Zoysiagrass

How To Apply Insignia.

Because **Insignia** controls such a broad spectrum of diseases for such an extended period, it's the perfect foundation product for your fungicide spraying program. As with all fungicide chemistries, **Insignia** should be applied as part of a rotation. **Insignia** can be tank-mixed with other fungicides for additional disease control.

To achieve optimal results, make no more than two successive applications of **Insignia**. For specific application rates and instructions, consult the product label.

Hear The Feedback.

"I seemed to have the same results - almost complete control - even with an extended time between applications. I was tickled with that, especially because **Insignia** is used at a much lower rate than ProStar®."

— Paul Miller on the results he got using **Insignia** to control fairy ring at Nashawtuc Country Club in Concord, Massachusetts - Get the Case Study

"The greens looked really bad, but within seven days the turf showed a significant recovery and in 10 days the rapid blight disappeared altogether."

— Mike Caranci on how **Insignia** took care of problem rapid blight at Candlewood Country Club in Whittier California - Get the Case Study
