

Iprodione Pro 2 SE Fungicide

Take Control.

Iprodione Pro effectively controls key turf diseases including:

- >> Large Patch
- >> Fusarium Blight
- >> Corticum Red Thread
- >> Leaf Spot
- >> Necrotic Ring Spot*
- >> Gray Snow Mold*
- >> Fusarium Patch*
- >> Pink Snow Mold*

*For improved control, use Iprodione Pro in tank mix with Thiophanate Methyl or re-treat at shorter intervals.

How To Apply Iprodione Pro.

Apply Iprodione Pro when conditions predict disease development. Repeat applications should be made according to label directions based on disease development.

Apply at the rate of 2 to 8 oz. in 0.5-10 gallons of water per 1,000 sq.ft. Allow foliage to dry before irrigation or mowing (24 hours preferred). For more information on additives, mixing order, tank mixes, maximum use rates, restricted entry interval and crop-specific information, consult the product label.
