# Great Lakes

## Michigan, Minnesota and Wisconsin

This area has a short growing season compared to the rest of the US. The chilling effect from the Great Lakes results in a long winter with heavy snow cover, which calls for an effective snow mold program. Unlike many areas, dollar spot presents a problem all summer long in this region, increasing the importance of addressing this disease early, during the growing season.

Product timing is a suggestion only; optimize application for local weather and field conditions. Confirm active status of product registration in your state before using; not all products are registered in all states. Application Rate/1,000 sq. ft. is based on maximum label rate or range. Claims related to root strength, stress tolerance, resiliency and growth efficiency are specific to those BASF products containing pyraclostrobin, as shown.

Always read and follow label directions.
