# Long Island

## New York

Strict state and local registration requirements limit pesticide use in Long Island, creating a challenge for superintendents. The shoreline climate produces cool springs and warmer falls. Summers are also cooler, with variation between day and nighttime temperatures not as great as the rest of the state. Humidity tends to be higher around the ocean, which contributes to more intense disease pressures.

Product timing is a suggestion only; optimize application for local weather and field conditions. Confirm active status of product registration in your state before using; not all products are registered in all states. Application Rate/1,000 sq. ft. is based on maximum label rate or range. Claims related to root strength, stress tolerance, resiliency and growth efficiency are specific to those BASF products containing pyraclostrobin, as shown.

Always read and follow label directions.
