

Long Island Regional Turf Spray Program

Tees and Fairways – Cool Season

For tees, greens or fairways, superintendents trust BASF for the most effective high-quality golf solutions. Proven BASF innovations deliver superior performance in all geographical regions and climates, especially during peak stress times. With a specific protocol for each area of the country, the BASF Regional Turf Spray Program is specially designed to provide proven disease control and produce stronger roots, greater stress tolerance, higher resiliency and increased growth efficiency. The result is championship conditions, all year long.

Long Island

New York

Strict state and local registration requirements limit pesticide use in Long Island, creating a challenge for superintendents. The shoreline climate produces cool springs and warmer falls. Summers are also cooler, with variation between day and nighttime temperatures not as great as the rest of the state. Humidity tends to be higher around the ocean, which contributes to more intense disease pressures.

Product timing is a suggestion only; optimize application for local weather and field conditions. Confirm active status of product registration in your state before using; not all products are registered in all states. Application Rate/1,000 sq. ft. is based on maximum label rate or range. Claims related to root strength, stress tolerance, resiliency and growth efficiency are specific to those BASF products containing pyraclostrobin, as shown.

Always read and follow label directions.
