

Mid-Atlantic/Transition Zone Regional Turf Spray Program

14-Day Tees and Fairways – Cool Season

For tees, greens or fairways, superintendents trust BASF for the most effective high-quality golf solutions. Proven BASF innovations deliver superior performance in all geographical regions and climates, especially during peak stress times. With a specific protocol for each area of the country, the BASF Regional Turf Spray Program is specially designed to provide proven disease control and produce stronger roots, greater stress tolerance, higher resiliency and increased growth efficiency. The result is championship conditions, all year long.

Mid-Atlantic/Transition Zone

Delaware, Southern Illinois, Southern Indiana, Kentucky, Southern Ohio, Maryland, Southern Missouri and Virginia

Bentgrass fairways require a shortened spray interval in this zone, where dollar spot and brown patch are the primary diseases. If nighttime temperatures remain high during the heat of the summer, *Pythium* can also become a concern; the standard spray program includes preventive applications. Summer patch, take-all patch and fairy ring, which can also present problems, should receive treatments as well.

¹ Subject to a BASF Recommendation under FIFRA 2(ee) for fairy ring in certain states. See www.CDMS.net for BASF Technical Information Bulletin.

Product timing is a suggestion only; optimize application for local weather and field conditions. Confirm active status of product registration in your state before using; not all products are registered in all states. Application Rate/1,000 sq. ft. is based on maximum label rate or range. Claims related to root strength, stress tolerance, resiliency and growth efficiency are specific to those BASF products containing pyraclostrobin, as shown.

Always read and follow label directions.
