Mid-Atlantic/Transition Zone Regional Turf Spray Program

Greens – Cool Season

For tees, greens or fairways, superintendents trust BASF for the most effective high-quality golf solutions. Proven BASF innovations deliver superior performance in all geographical regions and climates, especially during peak stress times. With a specific protocol for each area of the country, the BASF Regional Turf Spray Program is specially designed to provide proven disease control and produce stronger roots, greater stress tolerance, higher resiliency and increased growth efficiency. The result is championship conditions, all year long.

Mid-Atlantic/Transition Zone

Delaware, Southern Illinois, Southern Indiana, Kentucky, Southern Ohio, Maryland, Southern Missouri and Virginia

Summer stress is particularly problematic for bentgrass greens in this geography. If nighttime temperatures remain high during summer months, *Pythium* can also become a significant concern. Watch for dollar spot, brown patch, fairy ring and other patch diseases as well, as each tends to be prevalent in this climate.

Product timing is a suggestion only; optimize application for local weather and field conditions. Confirm active status of product registration in your state before using; not all products are registered in all states. Application Rate/1,000 sq. ft. is based on maximum label rate or range. Claims related to root strength, stress tolerance, resiliency and growth efficiency are specific to those BASF products containing pyraclostrobin, as shown.

Always read and follow label directions.
