Midwest Regional Turf Spray Program

14-Day Tees and Fairways – Cool Season

For tees, greens or fairways, superintendents trust BASF for the most effective high-quality golf solutions. Proven BASF innovations deliver superior performance in all geographical regions and climates, especially during peak stress times. With a specific protocol for each area of the country, the BASF Regional Turf Spray Program is specially designed to provide proven disease control and produce stronger roots, greater stress tolerance, higher resiliency and increased growth efficiency. The result is championship conditions, all year long.

Midwest

Iowa, Illinois, Indiana, Missouri, Ohio

A 14-day spray interval is needed in these areas where disease pressure is more severe and expectations are high. Dollar spot is the biggest issue on fairways and tees, then summer patch, take-all patch and brown patch. Watch for *Pythium*, which may occur if weather conditions are favorable.

¹ Subject to a BASF Recommendation under FIFRA 2(ee) for fairy ring in certain states. See www.CDMS.net for BASF Technical Information Bulletin.

Product timing is a suggestion only; optimize application for local weather and field conditions. Confirm active status of product registration in your state before using; not all products are registered in all states. Application Rate/1,000 sq. ft. is based on maximum label rate or range. Claims related to root strength, stress tolerance, resiliency and growth efficiency are specific to those BASF products containing pyraclostrobin, as shown.

Always read and follow label directions.
