High Desert and Arid Plains Regional Turf Spray Program

Greens – Cool Season

For tees, greens or fairways, superintendents trust BASF for the most effective high-quality golf solutions. Proven BASF innovations deliver superior performance in all geographical regions and climates, especially during peak stress times. With a specific protocol for each area of the country, the BASF Regional Turf Spray Program is specially designed to provide proven disease control and produce stronger roots, greater stress tolerance, higher resiliency and increased growth efficiency. The result is championship conditions, all year long.

High Desert and Arid Plains

Northern Arizona, Colorado, Nevada, New Mexico, Southern Utah and Texas Panhandle

This region is characterized by higher elevation deserts and plains with moderate summer temperatures and low humidity. Winters are cold with windy, dry conditions. The key diseases in this area are dollar spot, summer patch and *Pythium*. Snow mold pressure is variable throughout the region, depending on elevation and snow fall.

Product timing is a suggestion only; optimize application for local weather and field conditions. Confirm active status of product registration in your state before using; not all products are registered in all states. Application Rate/1,000 sq. ft. is based on maximum label rate or range. Claims related to root strength, stress tolerance, resiliency and growth efficiency are specific to those BASF products containing pyraclostrobin, as shown.

Always read and follow label directions.
