Midwest Regional Turf Spray Program

Greens – Cool Season

For tees, greens or fairways, superintendents trust BASF for the most effective high-quality golf solutions. Proven BASF innovations deliver superior performance in all geographical regions and climates, especially during peak stress times. With a specific protocol for each area of the country, the BASF Regional Turf Spray Program is specially designed to provide proven disease control and produce stronger roots, greater stress tolerance, higher resiliency and increased growth efficiency. The result is championship conditions, all year long.

Midwest

Iowa, Illinois, Indiana, Missouri, Ohio

In this area of the country, dollar spot typically presents the most significant challenge on tees and fairways, but less so on greens due to the number of product applications and intervals. Fairy ring and brown patch are major concerns in spring, anthracnose is problematic in summer on *poa annua*, and *Pythium* is most difficult in the heat of summer.

¹ Subject to a BASF Recommendation under FIFRA 2(ee) for fairy ring, *Bipolaris* leaf spot and *Rhizoctonia* leaf spot and leaf and sheath spot in certain states. See www.CDMS.net for BASF Technical Information Bulletin.

Product timing is a suggestion only; optimize application for local weather and field conditions. Confirm active status of product registration in your state before using; not all products are registered in all states. Application Rate/1,000 sq. ft. is based on maximum label rate or range. Claims related to root strength, stress tolerance, resiliency and growth efficiency are specific to those BASF products containing pyraclostrobin, as shown.

Always read and follow label directions.
