

South Florida, Puerto Rico and Hawaii Regional Turf Spray Program

Seashore Paspalum – Warm Season

For tees, greens or fairways, superintendents trust BASF for the most effective high-quality golf solutions. Proven BASF innovations deliver superior performance in all geographical regions and climates, especially during peak stress times. With a specific protocol for each area of the country, the BASF Regional Turf Spray Program is specially designed to provide proven disease control and produce stronger roots, greater stress tolerance, higher resiliency and increased growth efficiency. The result is championship conditions, all year long.

Seashore Paspalum

South Florida, Puerto Rico and Hawaii

Seldom dropping below 55 degrees, this region offers optimum year-round temperatures for seashore paspalum. Greatest stresses include extended cloud cover, tropical moisture and heavy rounds of play between November and May. Depending on cultivars grown, dollar spot control can be a major concern in fall and spring. Large patch is active from mid to late summer and into the fall, when humidity and potential for rain downpours are greatest.

Product timing is a suggestion only; optimize application for local weather and field conditions. Confirm active status of product registration in your state before using; not all products are registered in all states. Application Rate/1,000 sq. ft. is based on maximum label rate or range. Claims related to root strength, stress tolerance, resiliency and growth efficiency are specific to those BASF products containing pyraclostrobin, as shown.

Always read and follow label directions.
