Fast, non-selective control of emerged weeds

Finale[®]

Herbicide

Finale[®] herbicide gives you fast, effective control of a broad spectrum of emerged annual and perennial grasses, broadleaf weeds, and woody species. It is absorbed rapidly through green tissue and produces results in two to four days under many conditions. And it controls even the toughest weeds, like poison ivy, dandelion and thistle.

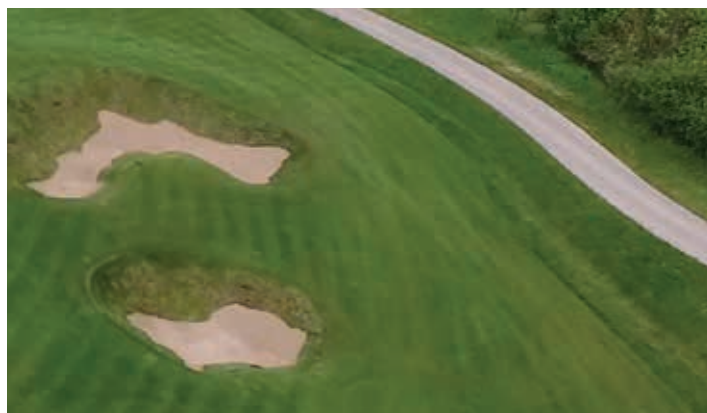

- **Use sites:** golf courses, lawns, sports fields, recreational areas, sod farms, non-crop areas
- **Works fast:** Visible results and control in 2-4 days under good growing conditions
- **Year-round control:** Use year-round for control of many weeds. Works faster than glyphosate during cool times of the year.

Best Uses

- Fast, non-selective control of a broad-spectrum of emerged annual and perennial weeds - more effective on broadleaf weeds than glyphosate
- Controls tough weeds, like annual bluegrass, goosegrass, poison ivy, dandelion and thistle
- No known resistance to any weeds (unlike glyphosate)
- Post-emergent, non-selective herbicide for use on dormant bermudagrass

Attributes

- This product is non-selective – it will injure or kill all green vegetation contacted by the spray
- Works best when weeds are actively growing
- Is non-systemic and only affects foliage that is contacted by the herbicide, allowing for precise edging
- Minimal soil-residual activity means transplanting or seeding is possible hours after application
- Rainfast in as little as 30 minutes, but may take up to 4 hours depending on rate, weed species being treated, and environmental conditions
- Effective tank-mix partner; compatible with many popular pre-emergent herbicides to provide residual control

Finale herbicide can be used along cart paths, stone walls and around bunkers.

How to Apply

- No surfactant required
- Finale herbicide is labeled for both spot treatments and broadcast applications
- Plants that have not yet emerged at the time of application will not be controlled

Spot Treatment

- Treat small areas of weeds using 2-4 fluid ounces of product per gallon of water

Broadcast Applications

- Apply 2-6 quarts per acre depending upon the weed and stage of growth (much lower rate of active ingredient per acre than glyphosate)
- Use a minimum of 40 gallons of water per acre with a minimum of 30 psi spray pressure
- Use higher rates within the recommended rate range for plant sizes listed when vegetation cover is dense

Fast, effective non-selective control of emerged annual and perennial weeds.

Use Areas

- Around Buildings
- Around sign and light posts
- Around sand traps
- Curbs
- Fence Rows
- Gravel Areas
- Hardscapes (including crack and crevice)
- Landscape Ornamental Beds
- Mulched Areas
- Parking Lots
- Paths
- Sidewalks
- Storage Yards

Package Size

- 2 x 2.5 gallon
